MBT SHAPE: CREATED BY WOMEN, FOR WOMEN

MBT Shape is one of the newest non-invasive and non-surgical method for body sculpting and skin renewal, using a combination of three innovative technologies: multipolar radiofrequency (RF), powerful ultrasonic cavitation and endermology.

MBT Shape is regarded as one of the most optimal solutions for body and skincare with it's innovative 3-in-1 system in the beauty industry.

WHAT IS MBT SHAPE

ONE MACHINE, THREE POWERFUL ELEMENTS

- ✓ Powerful Cavitation wavelength promotes the breakdown of the fat tissue by reaching deep into the area of subcutaneous fat.
- ✓ Multi-Polar RF: Actively promotes the degradation and lipid metabolism of fat cells. Ensures the tightening of the collagen fibers.
Light Therapy effect via RF technology:
 - ✓ Red Led 630nm: stimulates the production of collagen and helps repair damaged tissue.
 - ✓ Blue Led 430nm: helps to kill bacteria that causes acne, provides effective treatment for comedones and pimples.
- ✓ Endermology: Endermologie (vacuum technology) is an intensive massage that lifts and massages the skin through suction, resulting in a firm massage of both the skin and the subcutaneous connective tissue. This type of massage stimulates blood and lymph circulation, drains the lymph fluid, detoxes and fat cells. Additionally, it softens hardened (scar) tissue.
